## Charging the Battery:

**Please charge the battery fully prior to using the iBTVM!**

With the unit turned off, open the case and locate the charge port and charge lamp on the right side.

Connect the charging cable to the included AC adaptor and plug the adaptor into a standard 120VAC 60Hz outlet. The other end of the cable plugs into the charge port on the iBTVM. **DO NOT attempt to close the cover with the charger connected or charge port damage will result!**

### Charging Status:

The LED on the AC adaptor should illuminate when plugged into the wall outlet and the red charge lamp on the iBTVM battery pack should illuminate indicating the unit is charging.

When the red charge lamp on the iBTVM turns off, the unit is fully charged and ready for use.

When the iBTVM is powered on and connected to a compatible device, the voltmeter application on the tablet indicates the battery status by the green square in the top right corner of the screen. When nearly discharged, the battery level line will change from green to red.

When using the supplied charger and cable the iBTVM should fully recharge in 3-4 hours.

## Push Button Operation:

### Turning the unit ON:

Press the Push Button for **2 to 4 seconds** to turn the **Power ON**.  
The system is now in Active Mode.

### Turning the unit off:

If the power is already ON  
Press the Push button for **2 to 4 seconds** to turn the **Power OFF**.

### Resetting the unit:

Press the Push button for **6 to 10 seconds**  
This resets the power, turns OFF WPAN, voltmeter and GPS then turns everything back on again. The Blue pushbutton lamp will turn off and then back on.

### NOTE 1:

Pressing more than the above specified times will not turn the system ON, OFF or Reset until the button is released and pressed again within the time allowed.

### NOTE 2:

**On later models with the ORANGE push button switch, it is no longer necessary to hold the button in for a specified length of time to power on or off. Simply push to turn on and push again to turn off. The button remains in when the unit is on. Turning the unit off also performs the reset function.**

## LED1: Status Indicator: (Blue push button lamp)

### With the Power ON...

#### ON Mode ... LED1: On all the time

Normally when the system wakes up from power off or reset power, the system is on but no WPAN link to a tablet or smart phone, and there are no detected system errors.

#### Link Mode... LED1: On 1 sec, Off 3 sec

No activity on WPAN but there is an active link to tablet or phone. The system is ready for use.

#### Active Mode... LED1: ON 0.9 second, Off 0.1 second.

The system is linked and was receiving/sending commands to/from WPAN within the last 1 minute.

#### Battery Too Low or Error detected... LED1: On 0.2 sec, Off 0.2 sec

The detected system indication could be:

##### - Battery voltage too low:

The battery voltage is in a close to critical level. When battery voltage falls to 3.0 volts, this BAT / Error Mode starts blinking. When Battery reaches 2.7 volts, the system shuts itself off

### Power OFF indications:

#### The BLUE LED is Off

Normally it will be Off because the unit was turned Off or the battery voltage level is extremely low.

## Connecting an Android device to the iBTVM:

### Turning on the WPAN technology:

If WPAN is not already enabled on the tablet or smart phone do so by opening “Settings”, selecting the WPAN button and selecting “On”.

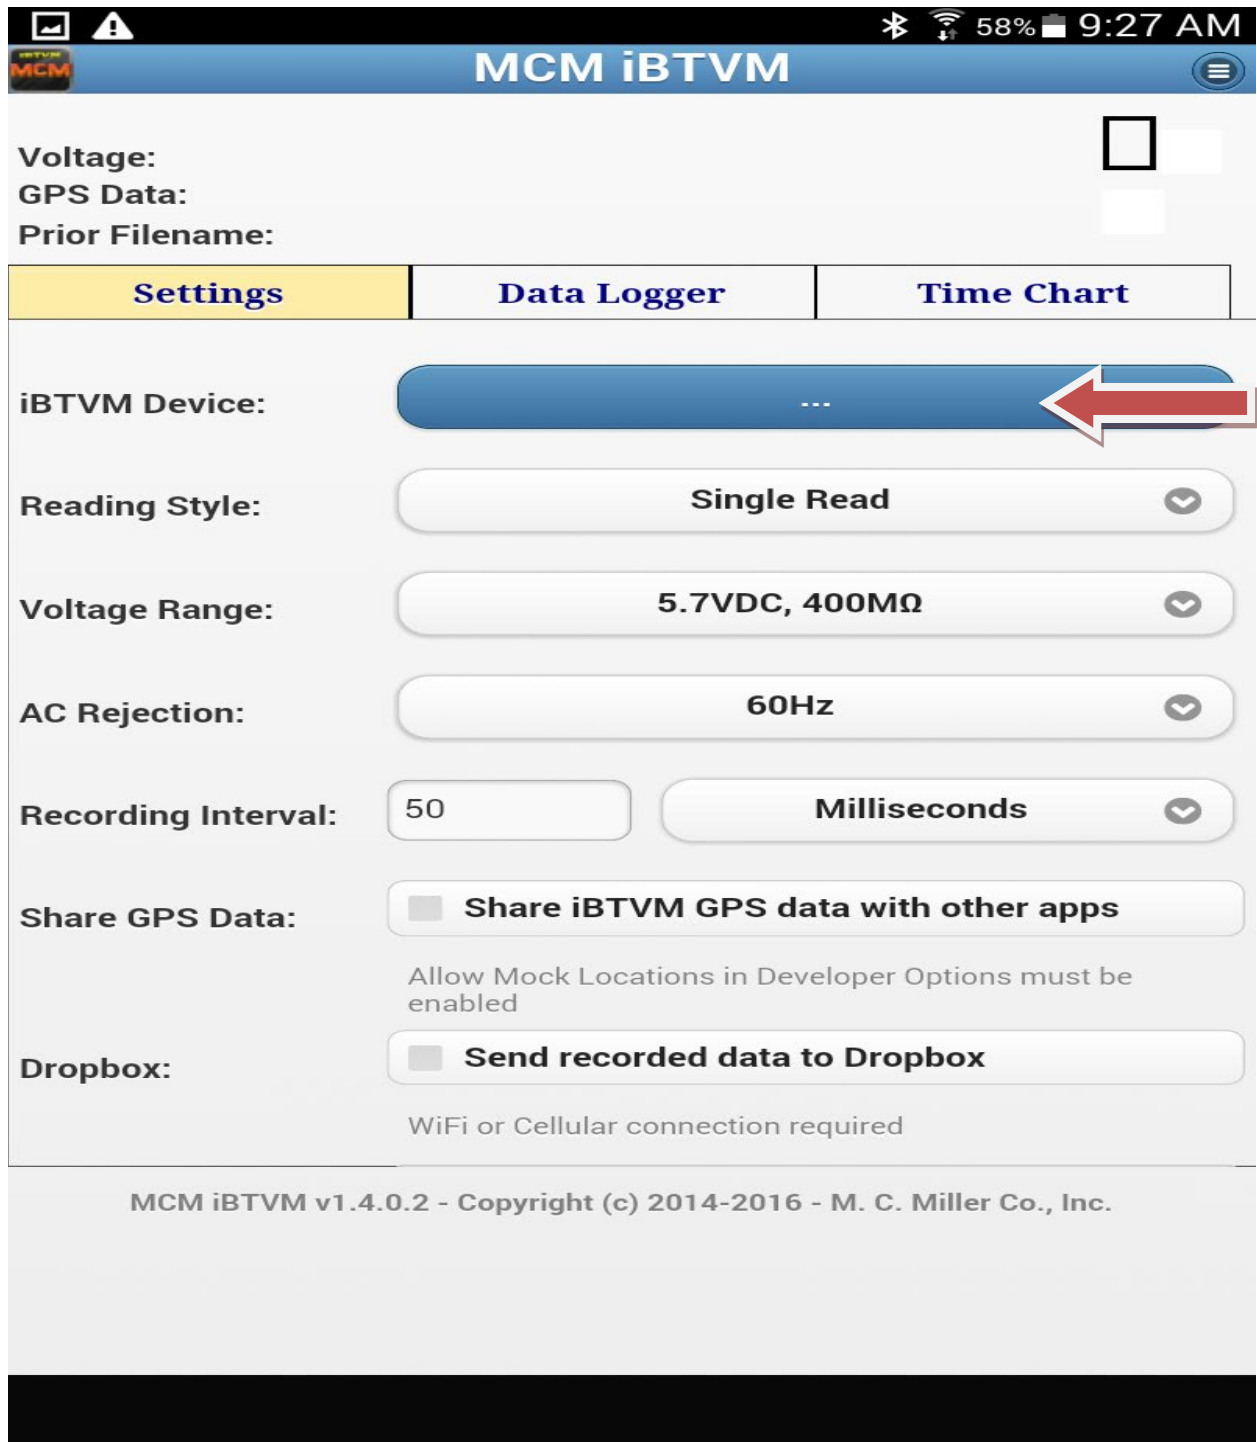

Having done this, close the “Settings” page.

### Opening and closing the “Basic” application:

Turn the iBTVM on as instructed above.

Find and tap the icon for the “MCM iBTVM” application and the app should open as shown below.

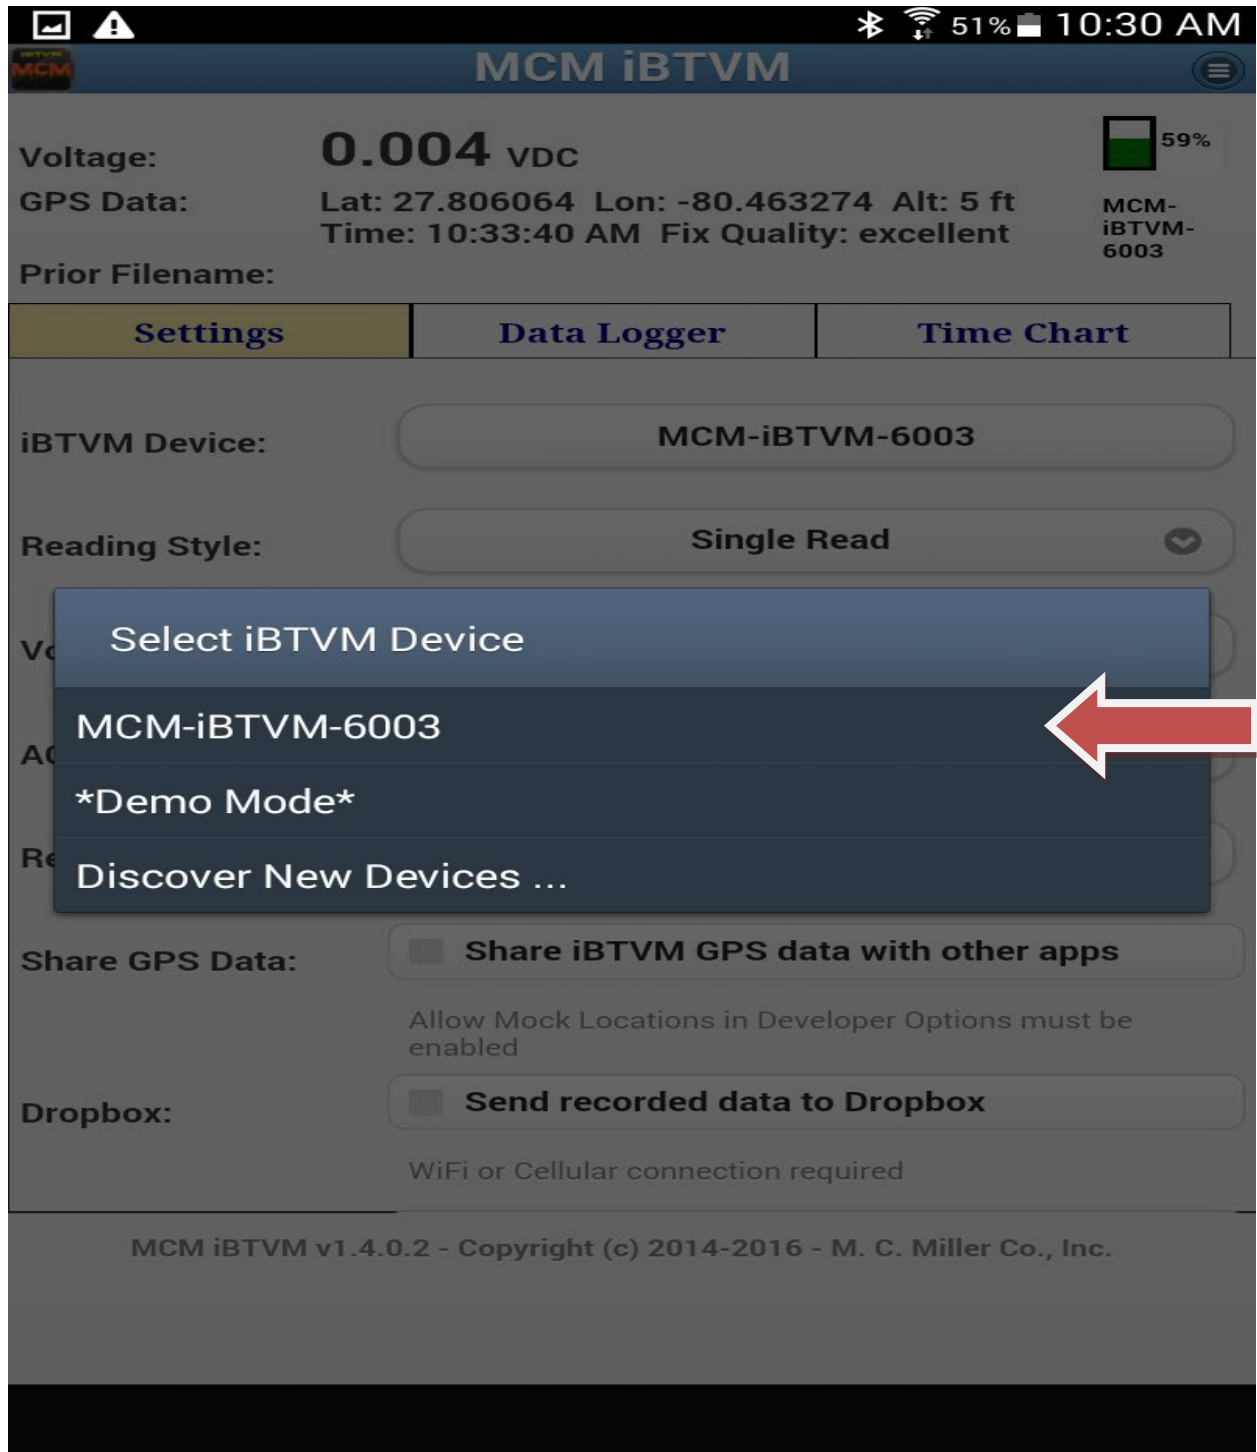

To close the application, tap the “Menu Bar” at the top right corner of the display, select “Exit” and tap “YES” to exit.

On the screen displayed above there is no currently connected device.

To connect to the iBTVM, turn the meter on and when the blue push button lamp is continuously on, tap the blue bar on the tablet display.

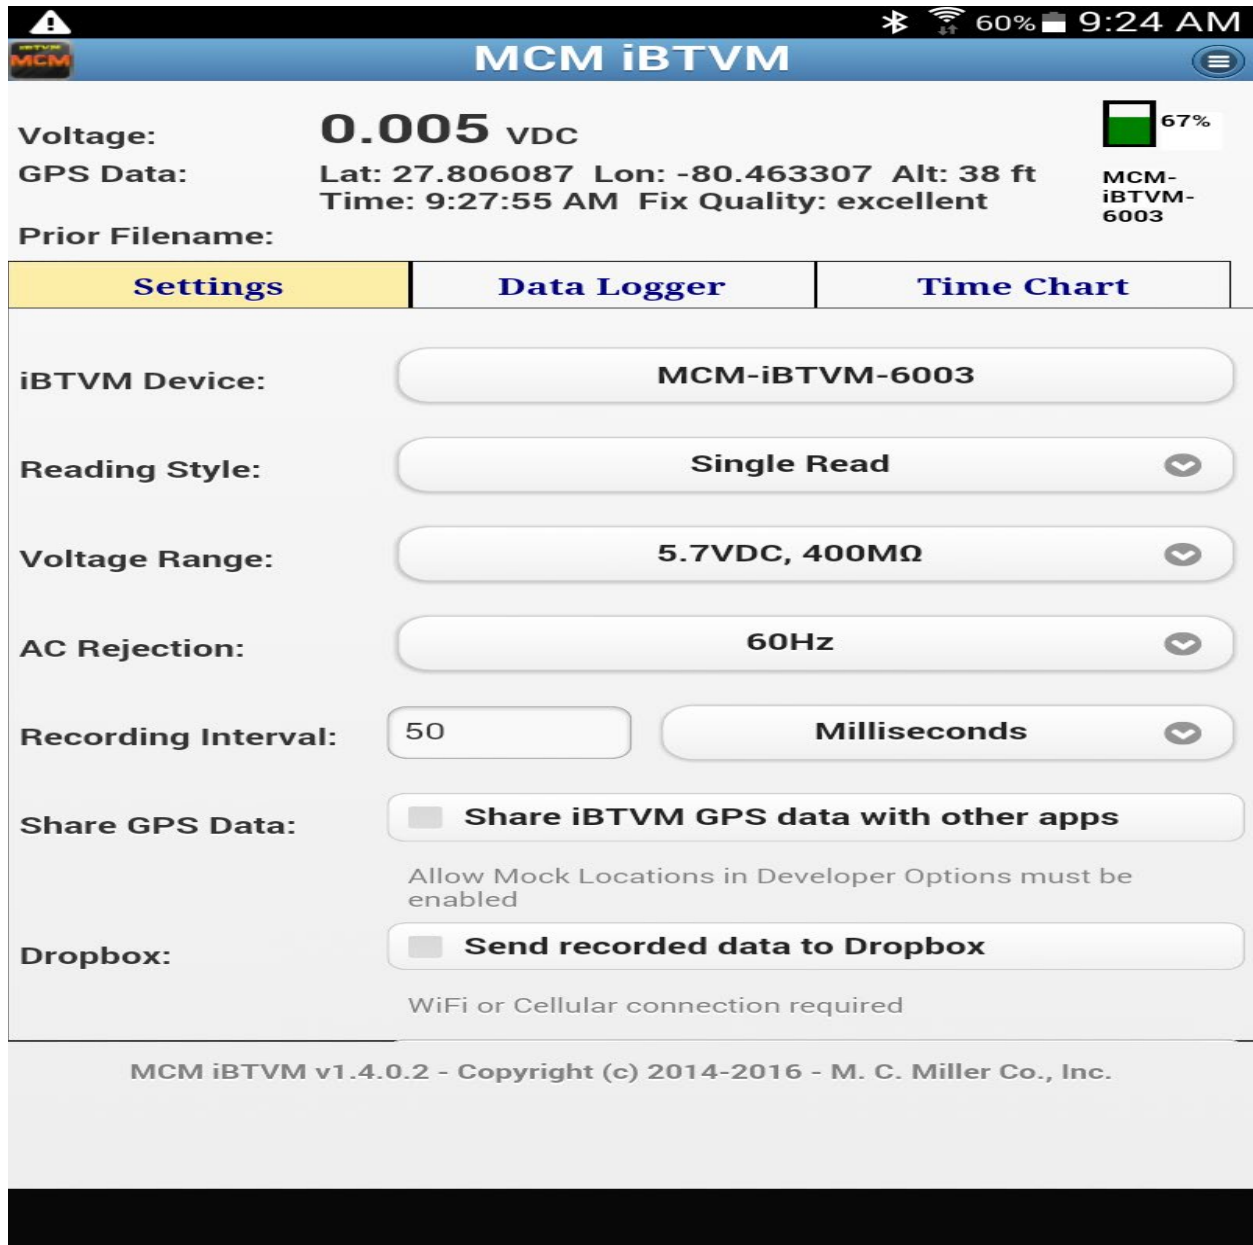

The next screen will show the available iBTVM(s). If none are shown, tap “Discover New Devices” to refresh the view. Then tap the device name matching that of the iBTVM you are using. For example: MCM-iBTVM-06005.

**Available iBTVM devices**

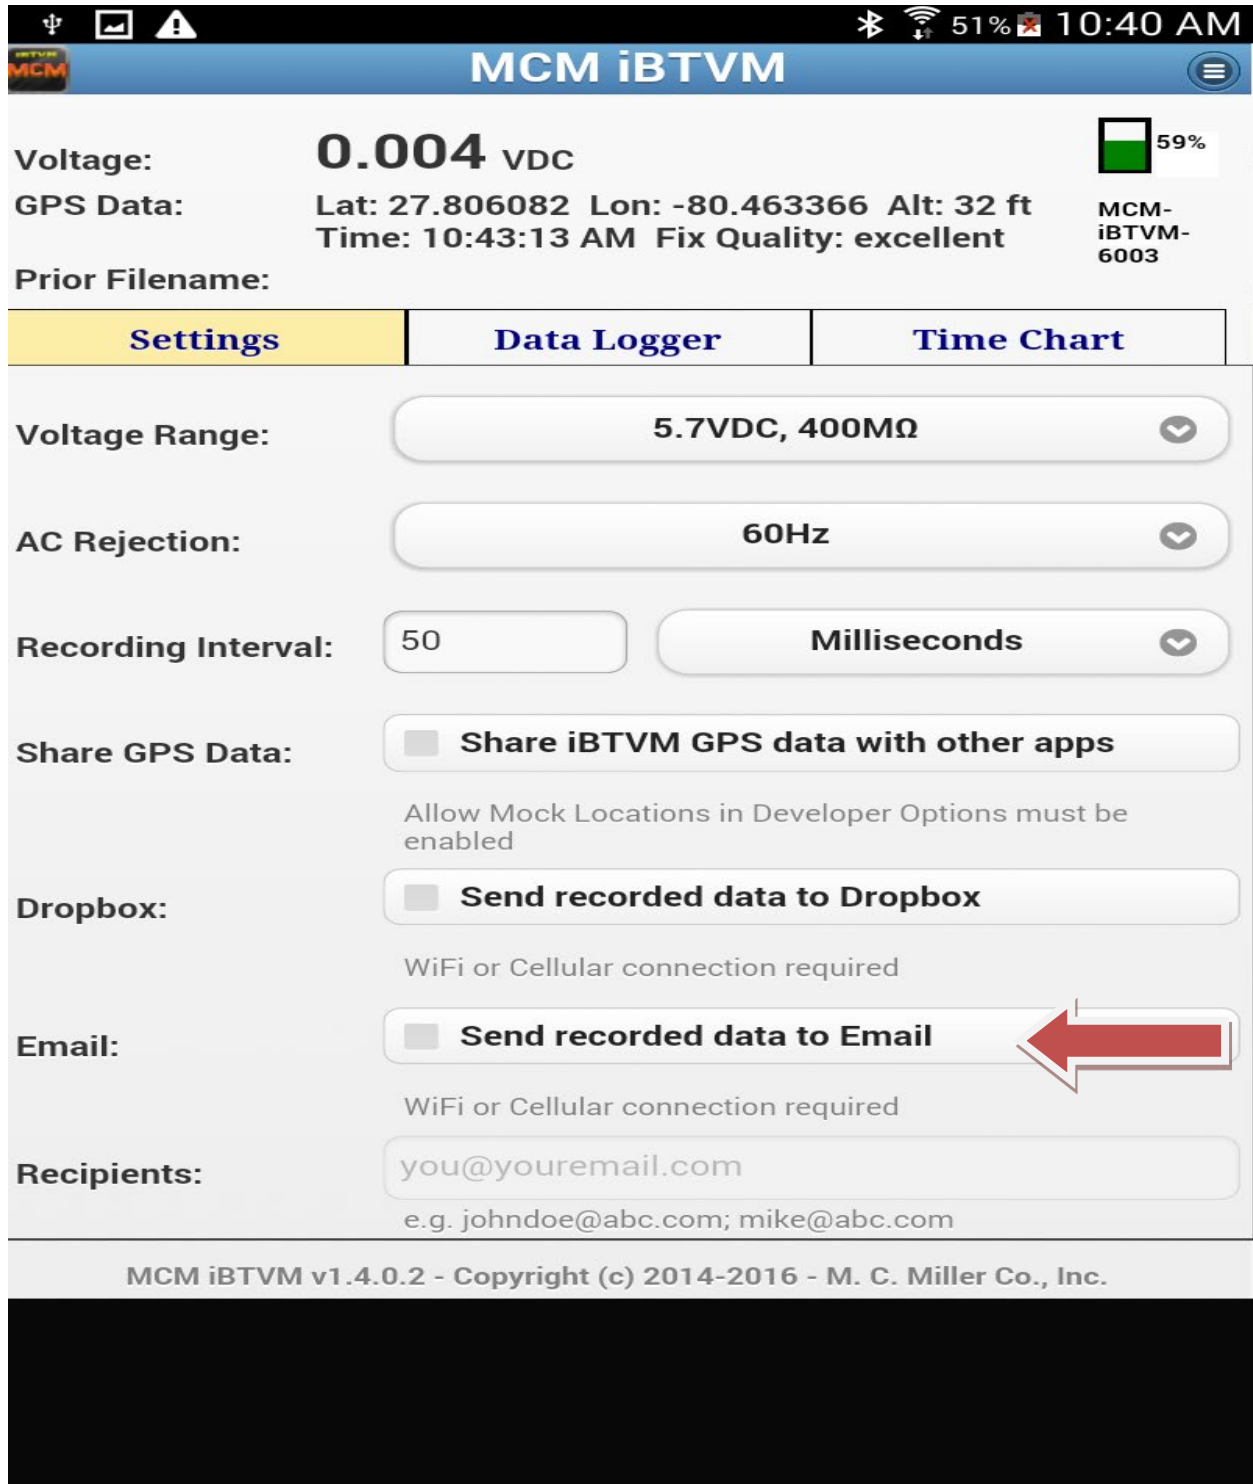

Once connected, the iBTVM will display the screen shown below (actual values may be different).

Before recording any data, it is desirable to set up the email and/or Dropbox accounts in the tablet's corresponding apps. These apps are then used by the iBTVM app to deliver recorded readings to your specified recipient.

To send data by email:

Tap the “Send recorded data to Email” box and enter the email address you wish to send the file to (see below).

To use Dropbox:

Tap the “Send the recorded data to Dropbox” and enter the requested Dropbox account information as shown below.

A Dropbox app wants to link with your account.  
**Need a Dropbox account?**

someone@email.com

.....|

Remember me

Sign in

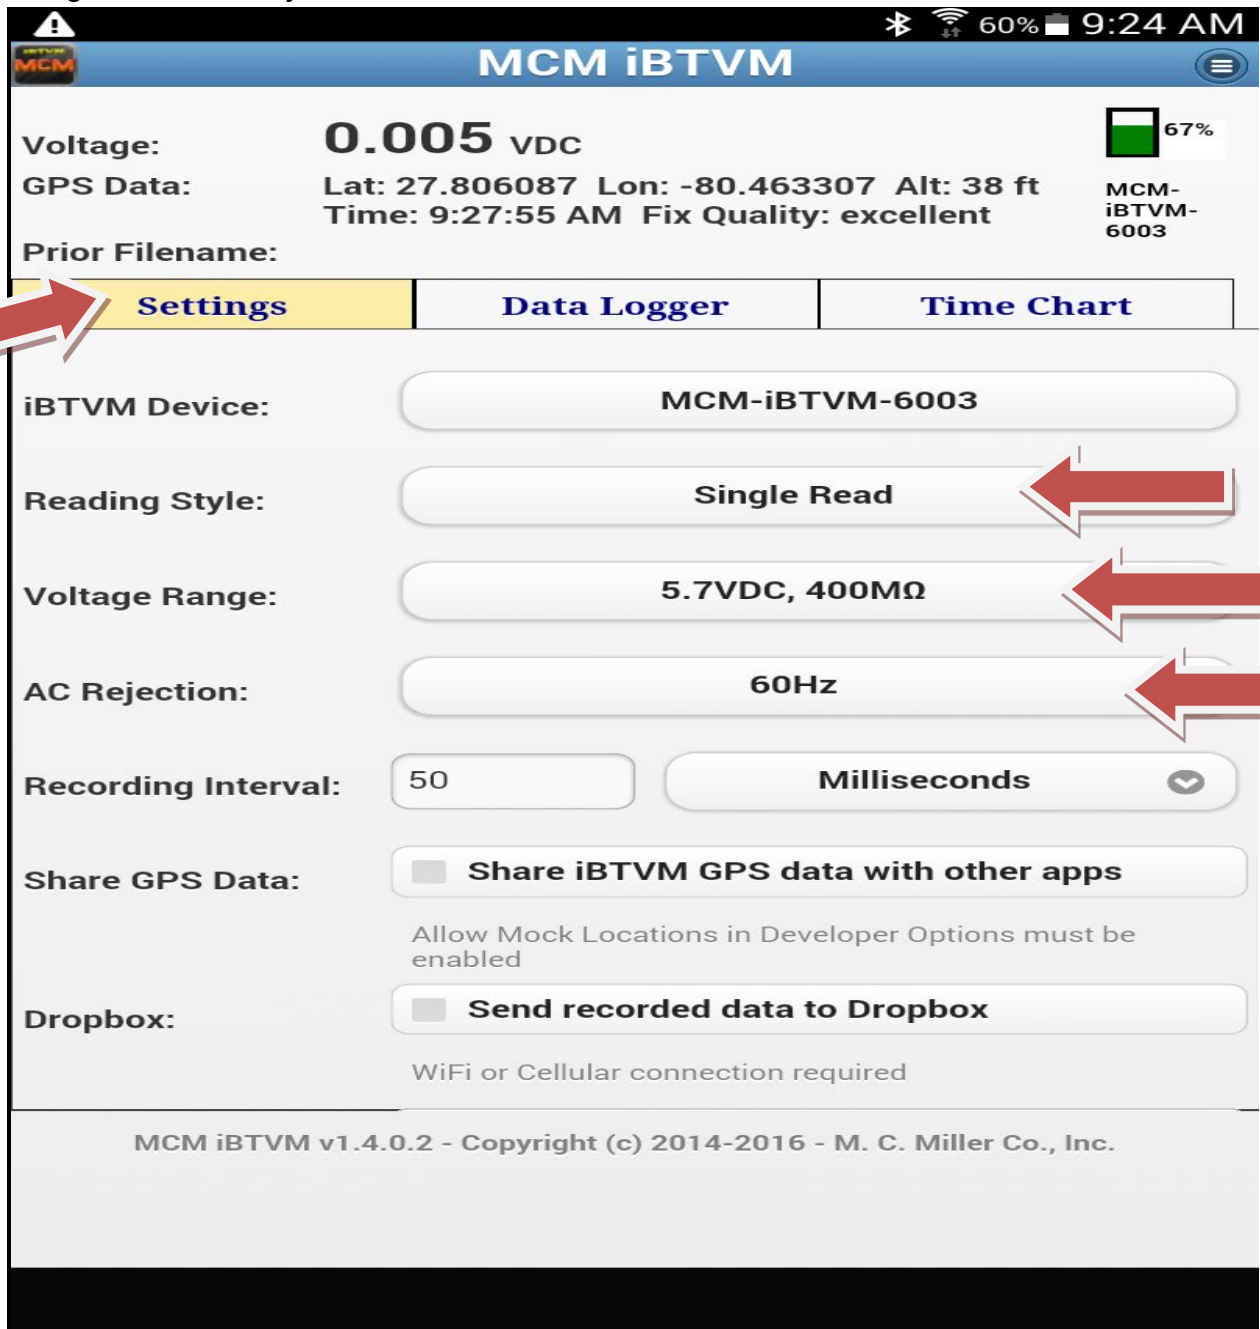

[Forgot your password?](#)

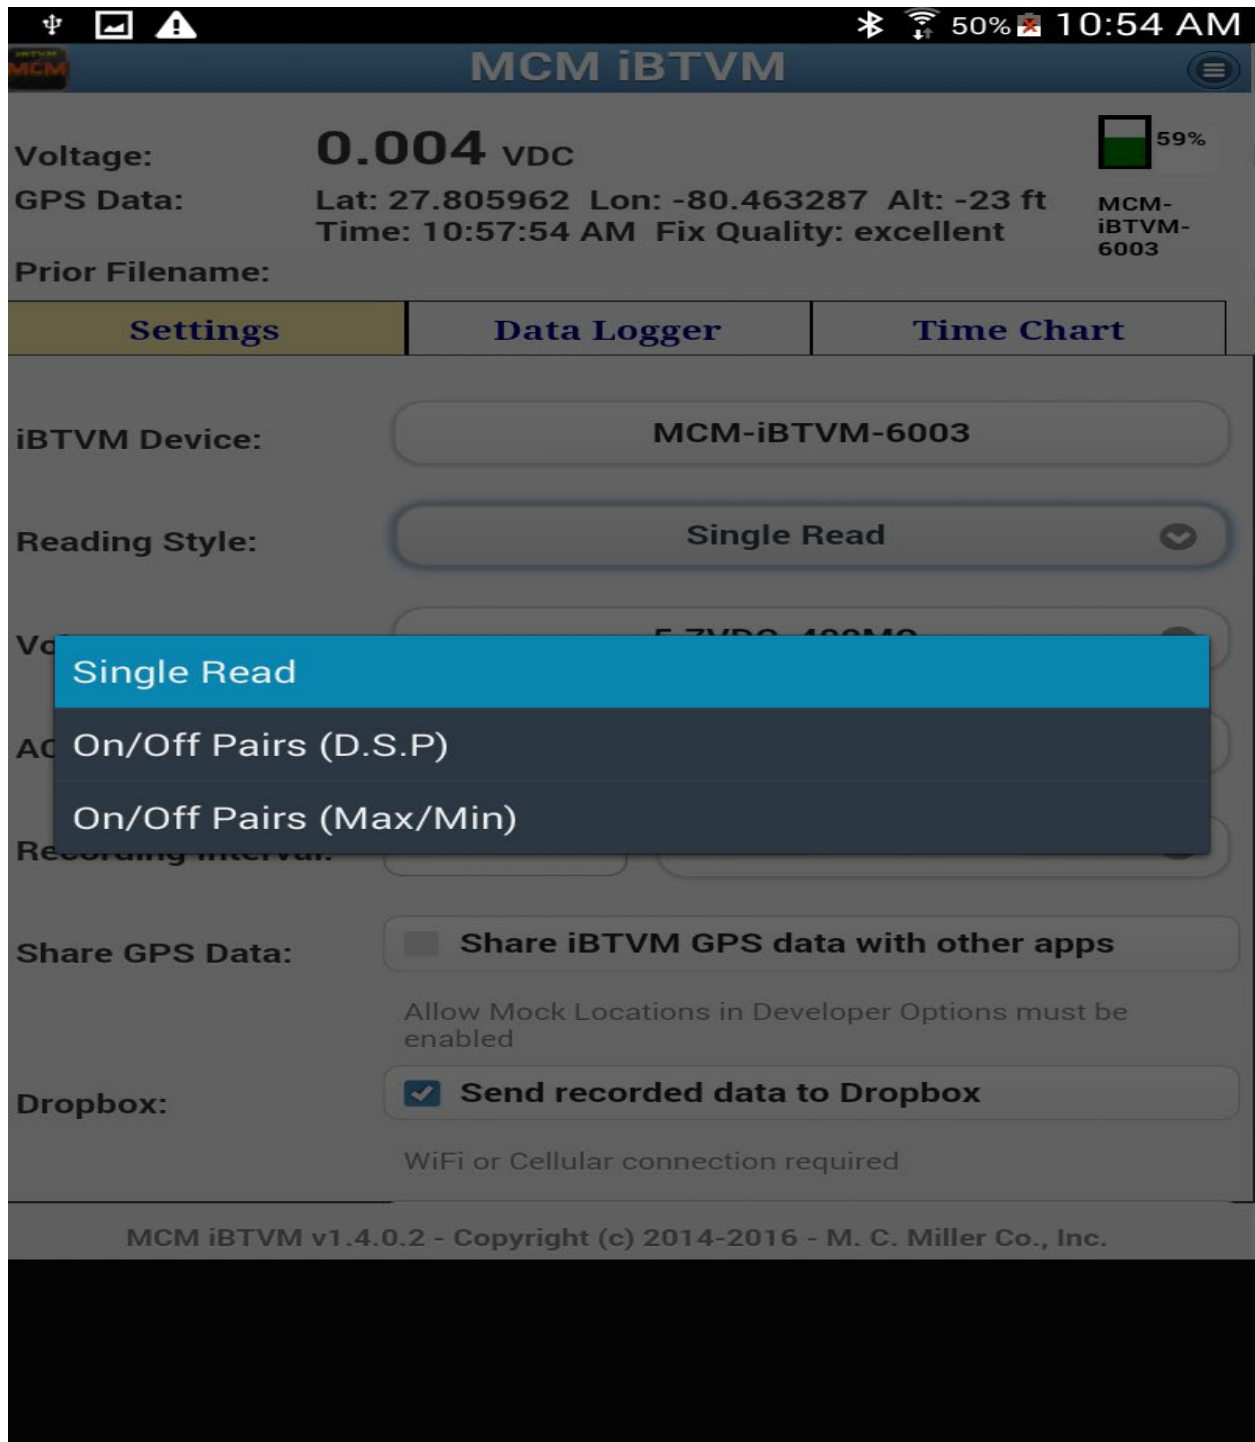

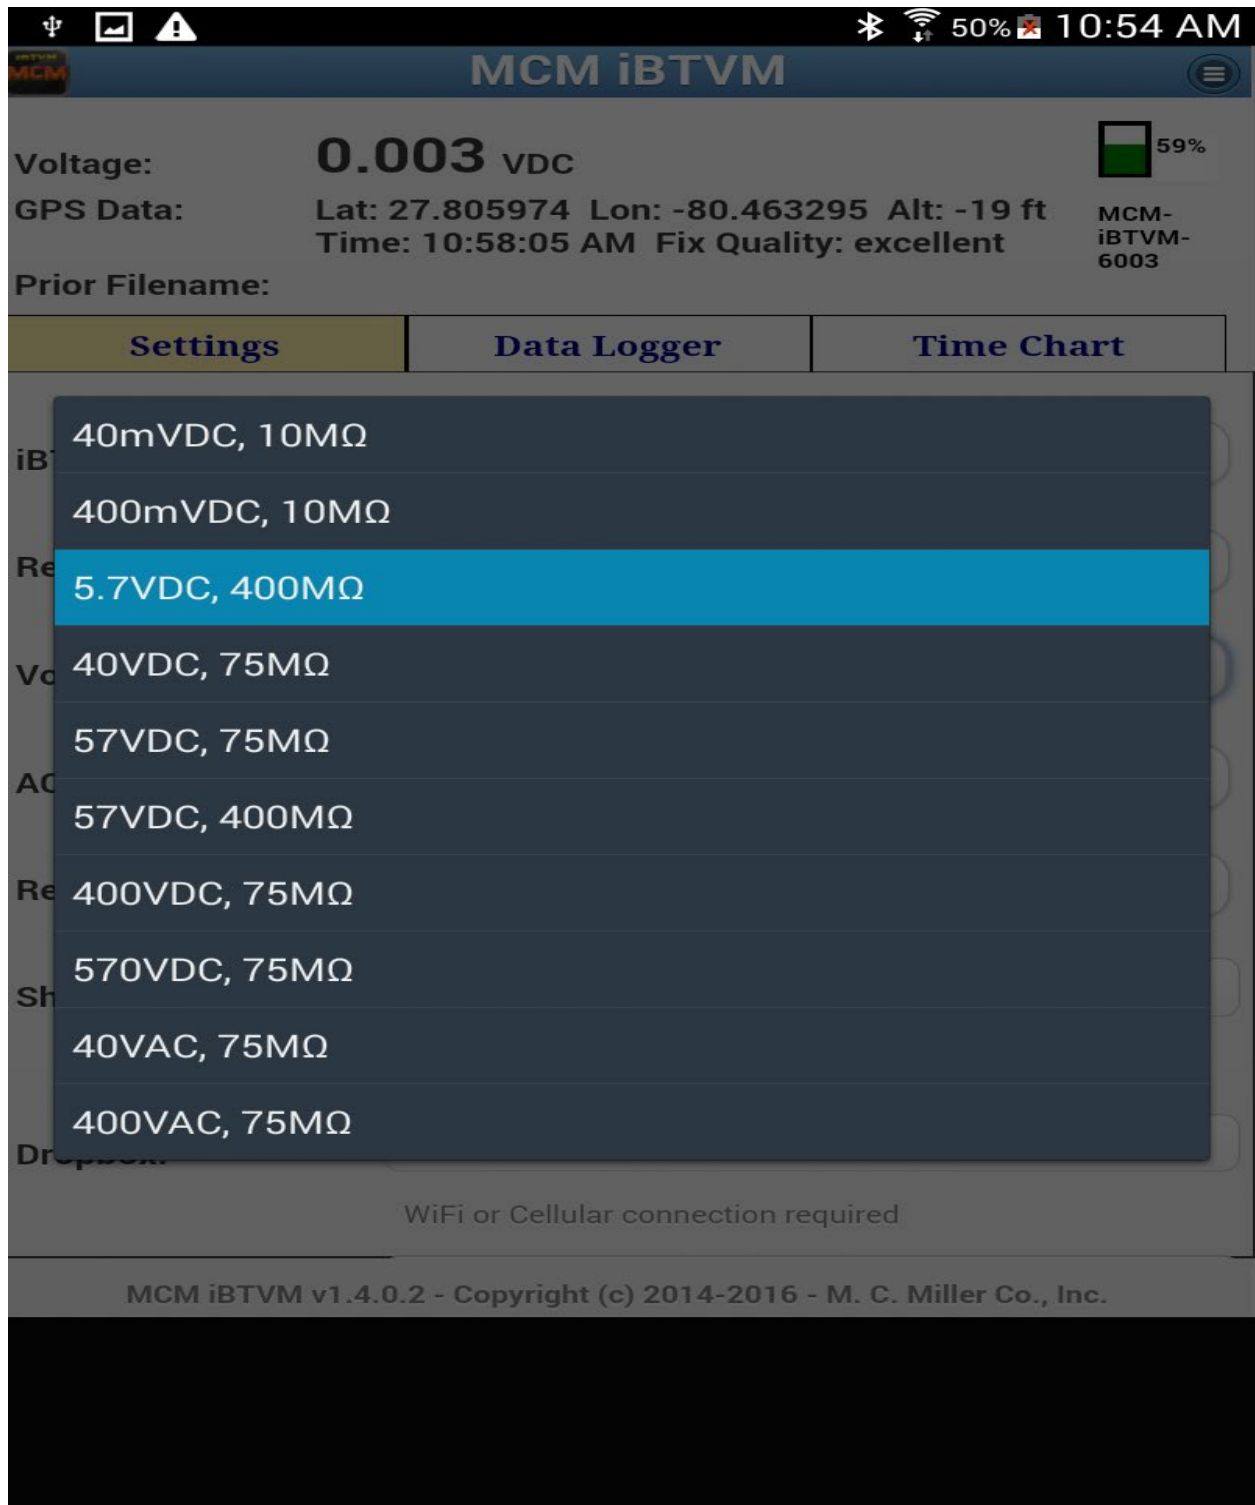

NOTE: In order to use either the Dropbox or email functions the mobile device must have an active cellular or Wi-Fi connection.

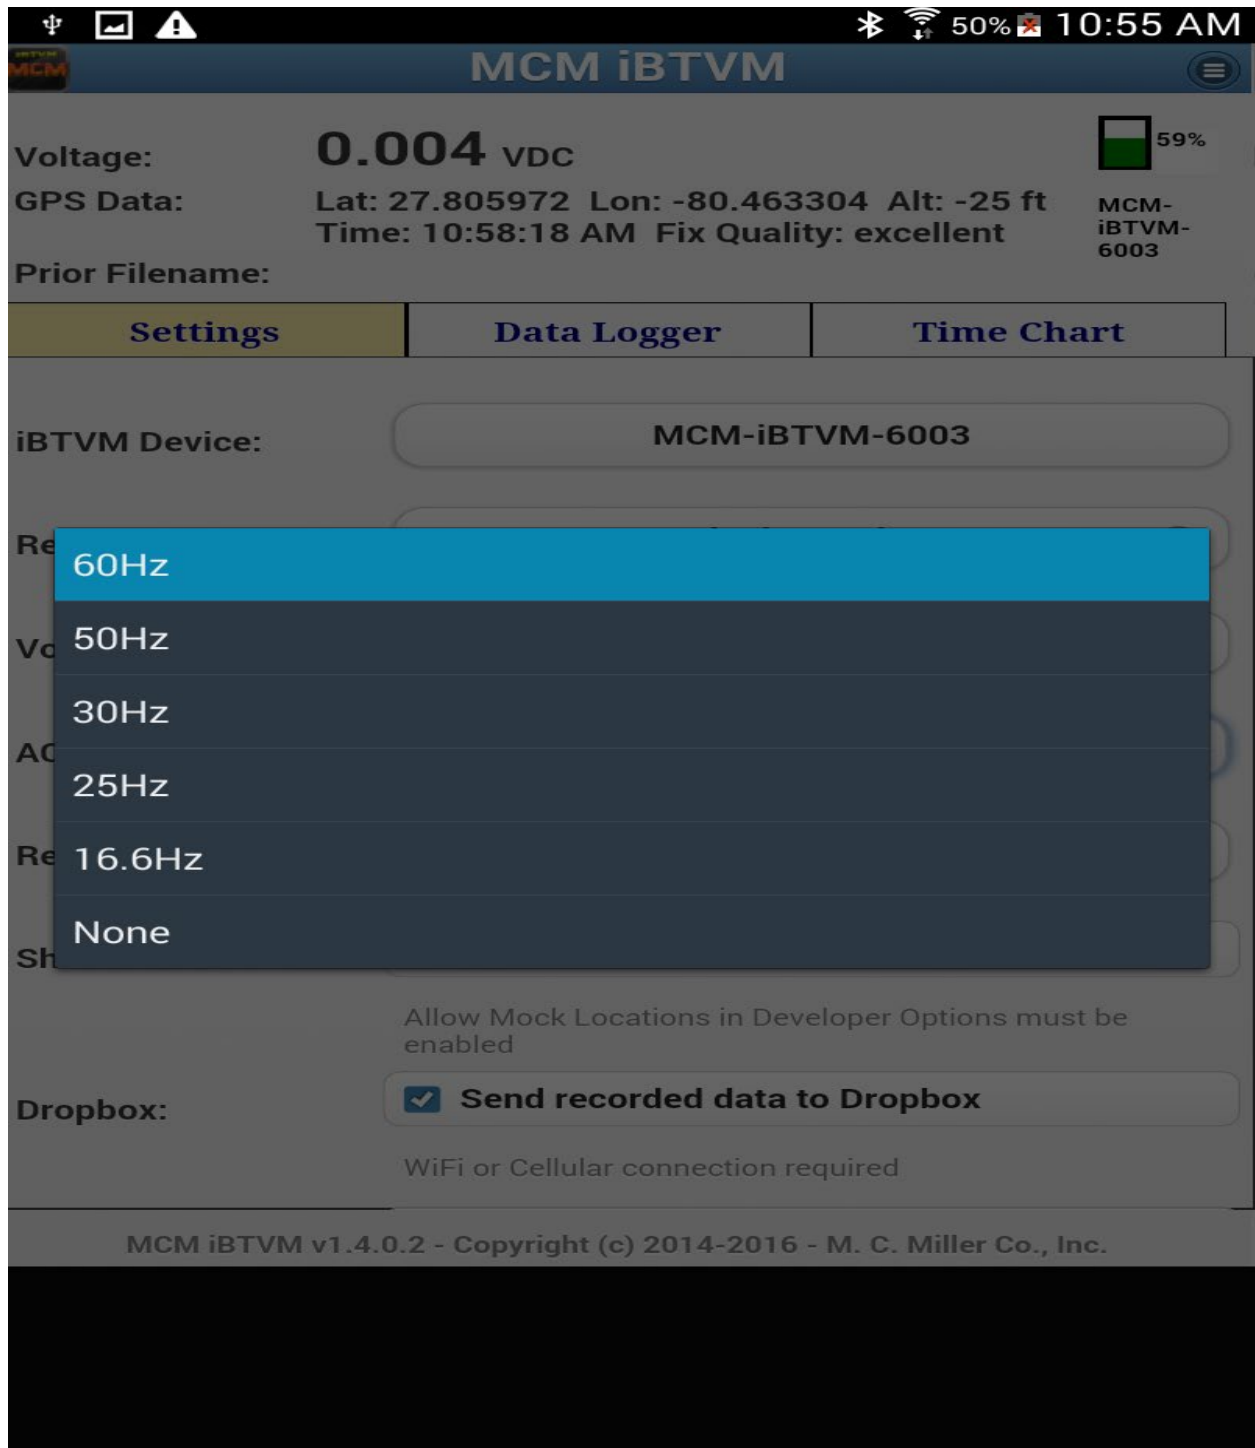

**Voltmeter setup:**

Tap the “Voltmeter Settings” tab and choose the appropriate “Reading Style”, “Voltage Range” and “AC Rejection” as shown in the next four slides.

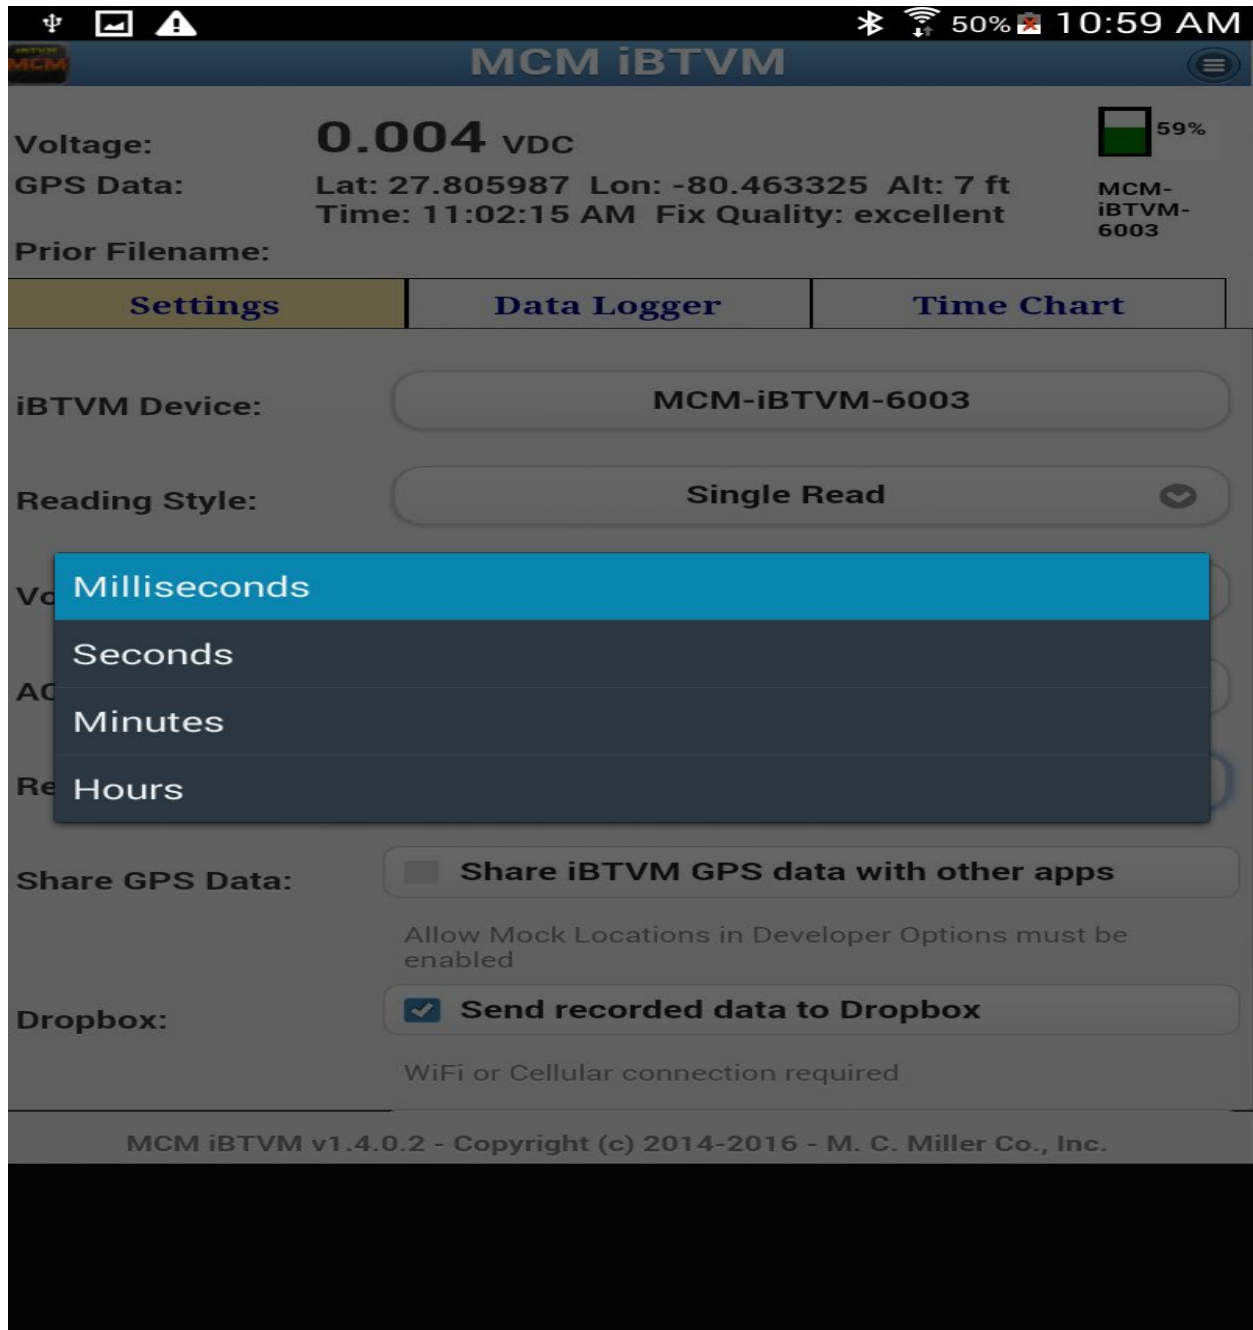

In 'Single Read' mode, you can select the desired recording interval duration as shown in the following three slides (minimum recording interval is 50ms).

The screenshot displays the MCM iBTVM mobile application interface. At the top, a status bar shows system icons (USB, keyboard, camera, warning), Bluetooth, Wi-Fi, 50% battery, and the time 10:59 AM. Below this is a blue header with the MCM logo and the text "MCM iBTVM".

The main display area shows the following data:

- Voltage:** 0.004 VDC
- GPS Data:** Lat: 27.805997 Lon: -80.463321 Alt: 7 ft  
Time: 11:02:21 AM Fix Quality: excellent
- Prior Filename:**

On the right side, there is a battery icon showing 59% and the device ID "MCM-iBTVM-6003".

Below the data is a navigation bar with three tabs: "Settings" (highlighted in yellow), "Data Logger", and "Time Chart".

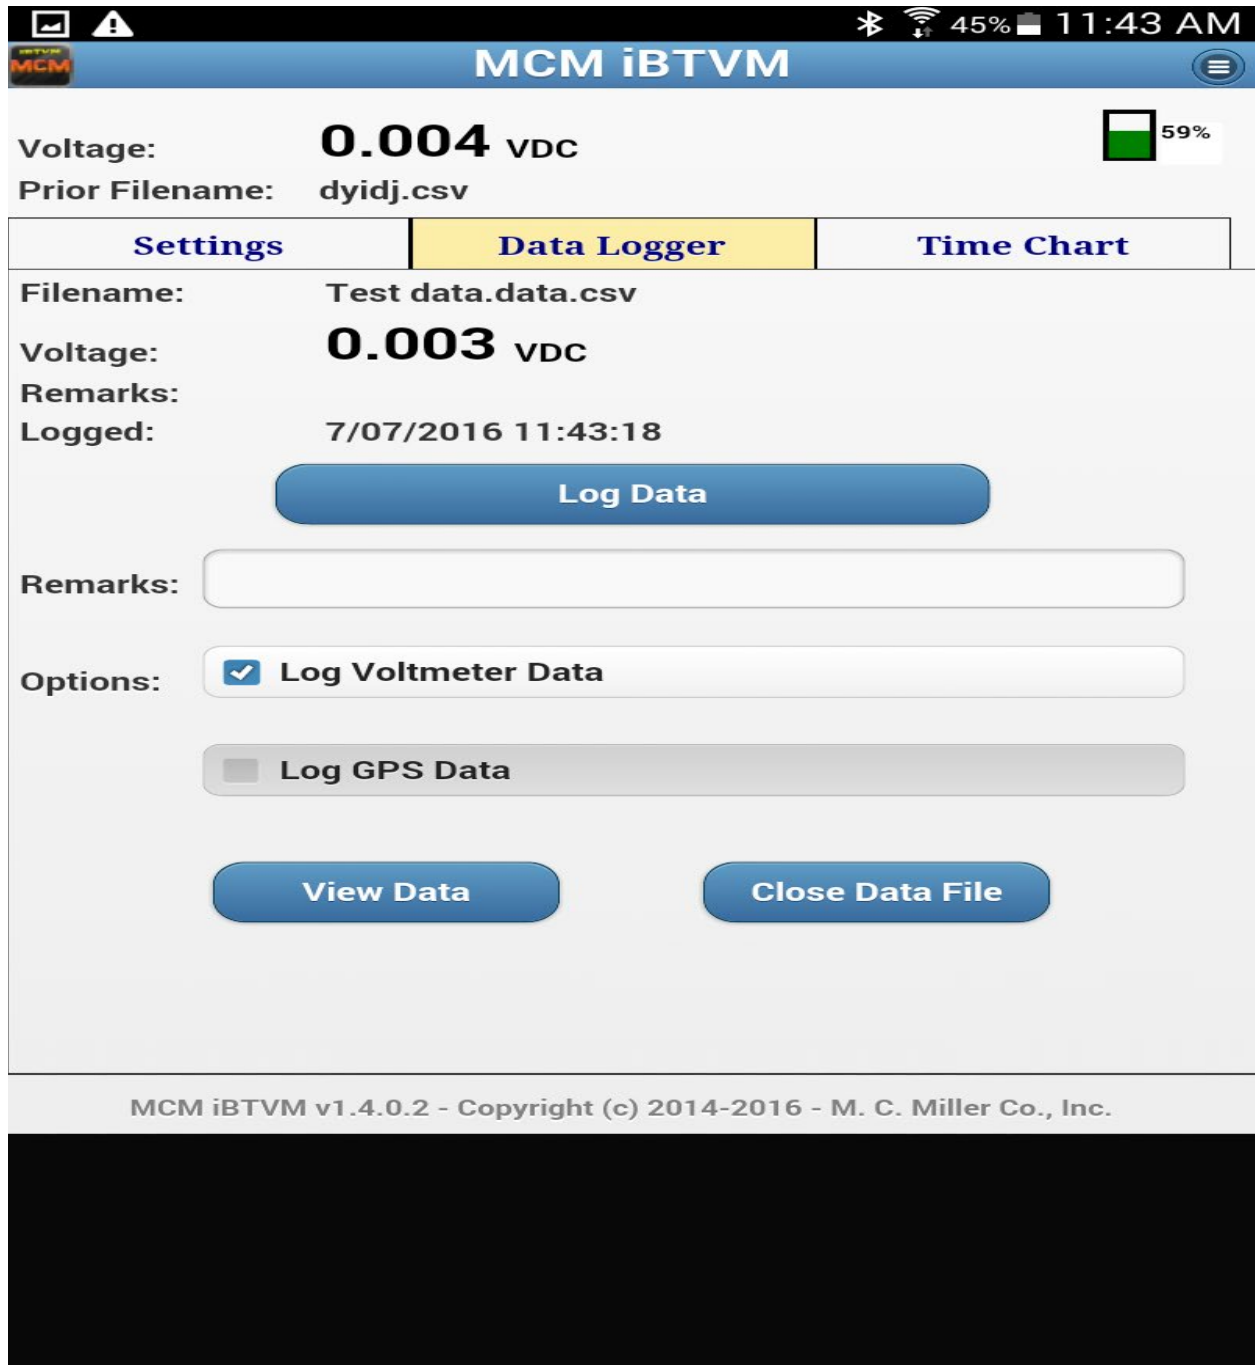

The "Settings" screen contains several adjustable parameters:

- iBTVM Device:** MCM-iBTVM-6003
- Reading Style:** Single Read
- Voltage Range:** 5.7VDC, 400MΩ
- AC Rejection:** 60Hz
- Recording Interval:** 50 (input field) and Milliseconds (dropdown)
- Share GPS Data:**  Share iBTVM GPS data with other apps

A numeric keypad overlay is visible at the bottom of the screen, with buttons for digits 1-9, 0, a backspace key (X), a "Next" key, and a settings gear icon.

## Using the Data logger Function:

On the DATALOGGER screen, select “LOG VOLTMETER DATA”, create and name a new data file.

Each time you tap the “LOG DATA” button, a datum will be recorded.

Select "VIEW DATA" and the chart of logged readings is displayed.

Saving screenshot...

Date/Time	Remarks	Volts1	Volts2	Latitude	Longitude	Altitude	Fix Quality	VM Mode	VM Range	On Time	Off Time	iBTVM ID
7/07/2016 11:43:06		-1.031VDC						single	5.7 VDC 400 Mohm			MCM-iBTVM-6003
7/07/2016 11:43:08		0.004VDC						single	5.7 VDC 400 Mohm			MCM-iBTVM-6003
7/07/2016 11:43:10		-1.031VDC						single	5.7 VDC 400 Mohm			MCM-iBTVM-6003
7/07/2016 11:43:12		0.003VDC						single	5.7 VDC 400 Mohm			MCM-iBTVM-6003
7/07/2016 11:43:13		-1.031VDC						single	5.7 VDC 400 Mohm			MCM-iBTVM-6003
7/07/2016 11:43:15		0.003VDC						single	5.7 VDC 400 Mohm			MCM-iBTVM-6003
7/07/2016 11:43:16		-1.031VDC						single	5.7 VDC 400 Mohm			MCM-iBTVM-6003
7/07/2016 11:43:18		0.003VDC						single	5.7 VDC 400 Mohm			MCM-iBTVM-6003

**Close**

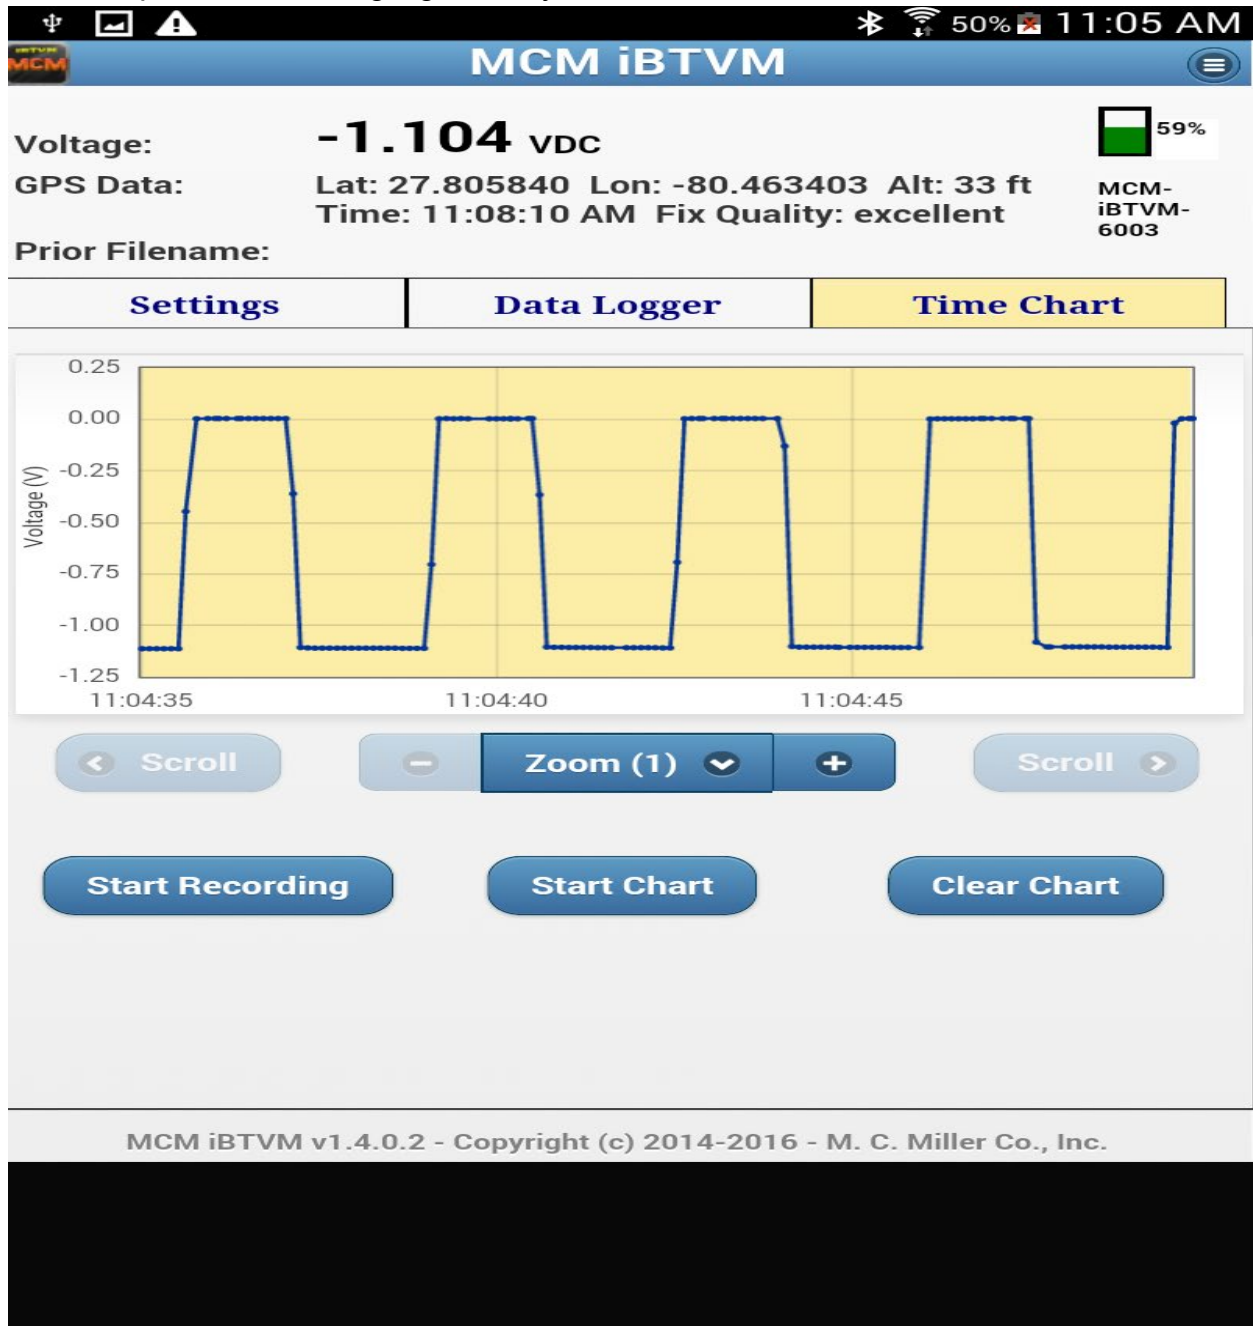

MCM iBTVM v1.4.0.2 - Copyright (c) 2011-2016 - M. C. Miller Co., Inc.

To stop logging, simply select CLOSE DATA FILE. The logging process will end and the data file is saved in the folder "MCMiBTVM" in .CSV format.

## Using the data recorder:

### Setting the recording interval

A sample from the chart recording display is shown in the next two slides. The first slide displays the voltage readings on the graph. After tapping the “Start Recording” tab, the recorded portion will be highlighted in yellow on the screen.

Sample time chart display

The screenshot displays the MCM iBTVM mobile application interface. At the top, the status bar shows signal strength, Wi-Fi, 49% battery, and the time 11:07 AM. The app title "MCM iBTVM" is centered in a blue header. Below the header, the current voltage is displayed as **0.003 VDC**. To the right, a battery icon shows 59% charge. The "GPS Data" section provides location information: Lat: 27.806002, Lon: -80.463344, Alt: 19 ft, and Time: 11:10:22 AM with a "Fix Quality: excellent" status. The "Prior Filename:" field is currently empty. A navigation bar contains three tabs: "Settings", "Data Logger", and "Time Chart", with "Time Chart" being the active tab. The main area features a line graph of Voltage (-V) over time. The y-axis ranges from -0.25 to 1.25 V, and the x-axis shows times from 11:06:55 to 11:07:05. The graph shows a square wave signal that alternates between approximately 1.0 V and 0.0 V. Below the graph are control buttons: "Scroll" (left and right), "Zoom (1)" (with minus and plus icons), "Start Recording", "Stop Chart", and "Clear Chart". At the bottom, a footer contains the text "MCM iBTVM v1.4.0.2 - Copyright (c) 2014-2016 - M. C. Miller Co., Inc.".

Sample recording in progress:

The screenshot displays the MCM iBTVM mobile application interface. At the top, the status bar shows system icons, a battery level of 50%, and the time 11:05 AM. The app title "MCM iBTVM" is centered in a blue header. Below the header, the main display area shows:

- Voltage:** -1.104 VDC
- GPS Data:** Lat: 27.805840 Lon: -80.463403 Alt: 33 ft Time: 11:08:10 AM Fix Quality: excellent
- Prior Filename:** (empty field)
- Battery:** 59% (represented by a green bar icon)
- Device ID:** MCM-iBTVM-6003

A navigation bar below the data fields contains three tabs: "Settings", "Data Logger", and "Time Chart", with "Time Chart" currently selected and highlighted in yellow. The main content area features a line graph titled "Time Chart" showing a square wave voltage signal. The y-axis is labeled "Voltage (V)" and ranges from -1.25 to 0.25. The x-axis shows time markers at 11:04:35, 11:04:40, and 11:04:45. The waveform alternates between approximately -1.1 V and 0.0 V. Below the graph are control buttons: "Scroll" (left and right), "Zoom (1)" (with minus and plus icons), "Start Recording", "Start Chart", and "Clear Chart".

MCM iBTVM v1.4.0.2 - Copyright (c) 2014-2016 - M. C. Miller Co., Inc.

When finished recording, select “Stop Recording, name and save the file for later use”.

When you tap the “Stop Recording” button, you will be asked to name the file and confirm that you want to save it.

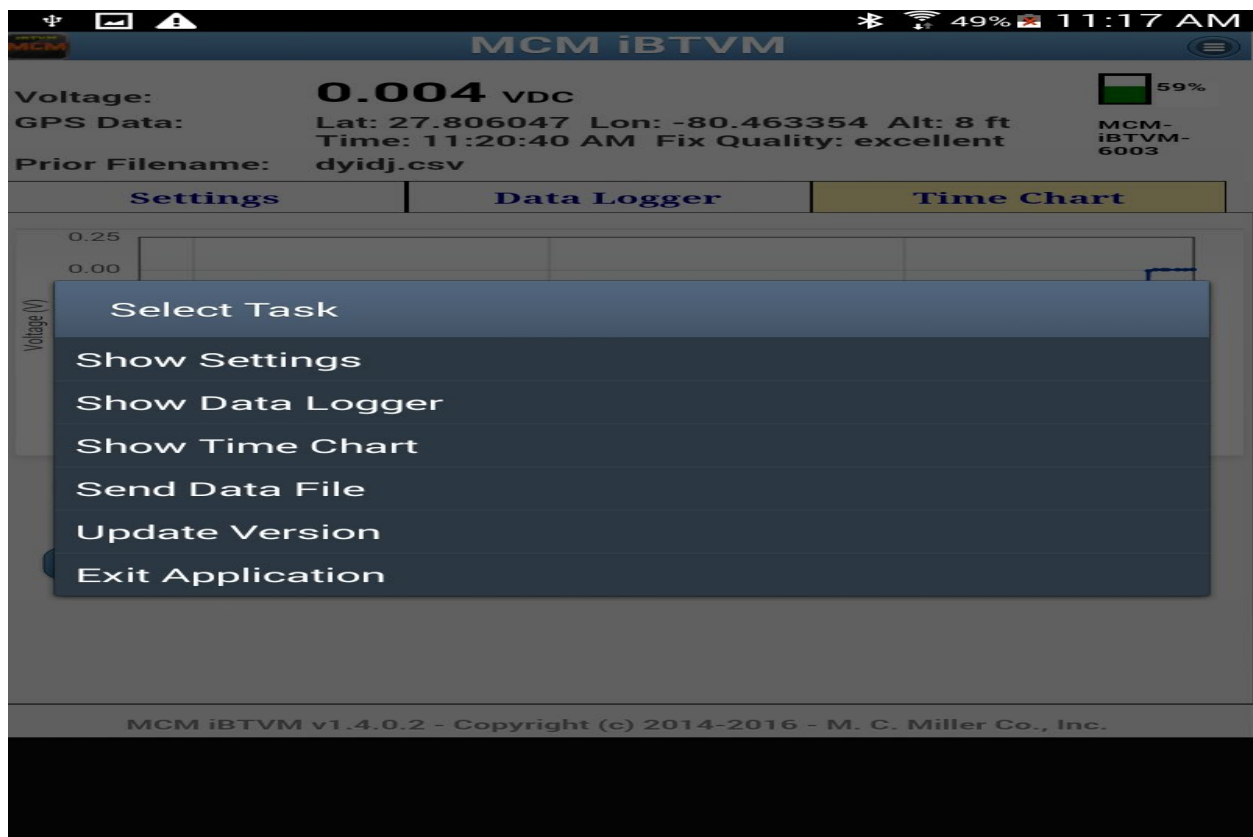

If you choose yes, the file is saved and the final screen allows you to email the file to the address you entered above during setup.

(If you want to email the file you must have an accessible WiFi or Cellular connection.)  
If you choose to send the file later, it can be found in the folder labeled “MCMiBTVM”.

### To close the application:

To close the application, tap the menu bar at the top right of the screen, Select Exit and tap “Yes” to confirm.

### Note:

Going forward into external connections, it is important to note, there is a potential safety issue if a data probe and banana jack leads are connected at the same time. If measuring a large AC or DC voltage with test leads attached via the banana jacks, the same voltage will be applied to the data probe, the probes banana jack, and the half cell.

Additionally, when using the banana jack inputs of the meter for precise measurements on the 40 mV range, one should not have a data probe attached to the 5 pin connector. Any voltage from the data probe input can affect the displayed potential. This can result in a different potential display if the test leads are reversed.

## External connections:

Use either the Red and Black sheathed banana jack or the 5 pin connector compatible with other equipment from MCM.

### Included Accessories:

120VAC Charger adaptor

USB Charge Cable

6 Foot Red and Black Test Leads with Clips (1 each)

Handy Belt Clip

Sturdy Carrying Case

## Voltmeter Characteristics:

- High Voltage Isolation for Operator Safety : Tested to 1kV steady-state/15kV transient voltage levels (designed for higher voltage level isolation) – operator isolated from power supply
- Non-Saturating : Voltmeter will not saturate on 5.7VDC and higher ranges with superimposed AC signals up to 120VAC (for readings up to approximately 50% of full scale at 60Hz) and/or inductive spikes up to 2kV appearing at the input terminals
- Extensive Ranges : Various DC Ranges (40mV full scale to 570V full scale) plus 40V and 400V AC Ranges. All DC Ranges have <80ms response times for accurate On/Off pair readings during fast current interruption cycling (for example, 700ms ON / 300ms OFF).

## Power Source:

- Lithium-Polymer rechargeable battery
- Interior battery charging port
- Re-chargeable battery lasts 18 hours with continuous usage
- Battery module easily replaced in the field

## Communication with Tablets/Phones via WPAN technology:

- Android compatible
- Connection status indicator, LED, on case exterior

## Connectors:

- 5-pin connector for optional push-button data-probe triggering of readings
- Two shrouded banana jacks (one red/one black) – 1,000V; CAT III (IEC 61010 rating)

## Integrated Sub-meter GPS System:

- Internal GPS antenna

## Environmental:

- IP65 Rated

## Temperature Ranges:

- Operating Range: 32°F to 104°F (0°C to 40°C) • Battery Charging Range: 32°F to 104°F (0°C to 40°C)

- Case Dimensions (approximate):** • 5-7/8" long x 3.5" wide x 1.75" high  
**Weight** • 0.82lb

### Specifications:

Voltmeter range, display resolution and accuracy specifications for the iBTVM, Input Impedance and Response Time (to 99% of final value).

Range	Display Resolution	Accuracy (% reading value)
<b>VDC</b>		
40mVDC, 10MΩ, 80ms	0.01mV	±0.2% ±0.08mV
400mVDC, 10MΩ, 80ms	0.1mV	±0.2% ±0.6mV
5.7VDC, 400MΩ, 80ms	0.001mV	±0.2% ±0.004V
40VDC, 75MΩ, 80ms	0.01mV	±0.2% ±0.04V
57VDC, 75MΩ, 20ms	0.01mV	±0.2% ±0.04V
57VDC, 400MΩ, 50ms	0.01mV	±0.2% ±0.04V
400VDC, 75MΩ, 80ms	0.1mV	±0.2% ±0.04V
570VDC, 75MΩ, 20ms	0.1mV	±0.2% ±0.04V
<b>VAC</b>		
40VAC, 75MΩ, 1.35s	0.01mV	±0.2% ±0.06V
400VAC, 75MΩ, 1.35s	0.01mV	±0.2% ±0.6V

AC range specifications valid over 10-1000Hz frequency range and 5-100% of full scale range.
